

Re-read pages 528-532 of van Inwagen's "Objectivity". Then on one single-spaced page **critically analyze** the imaginary anti-realist's argument for the following conclusion:

The fact that Mount Everest is 8,847.7 meters high is a social construct and depends on human mental activity.

Please type this assignment. If you need to, look back at **Arguments III** for what a completed critical analysis looks like.
